LESSON 1: CONTENT POSTING CADENCE & SCHEDULING

After warmup is complete and your accounts are growing, the next challenge is maintaining momentum. Consistency is what separates pages that plateau from pages that scale. This lesson covers the exact posting cadence that keeps the algorithm feeding you reach. Missing one day is fine. Missing three in a row resets your algorithmic momentum.

Daily Posting Schedule

- Instagram Reels: 1 per day (minimum 4-5 per week)
- Instagram Stories: 3-5 per day (keeps you at top of follower feed)
- Instagram Carousels: 2-3 per week (profile building)
- Threads: 5-8 text posts per day
- TikTok: 1-2 posts per day
- Twitter: 2-3 original tweets + 15-20 replies per day
- Reddit: 1 post per day across different subreddits

> **CONSISTENCY RULE**
>
> Missing one day is fine. Missing three in a row resets your algorithmic momentum. The algorithm rewards consistency above everything else. Set up a content calendar and treat posting like a daily business operation, not a hobby.

Optimal Posting Times

- Post when your target audience is online (check Insights after 2+ weeks)
- For US audiences: 11am-1pm EST and 7pm-9pm EST are peak windows
- The first 30 minutes after posting determine if the algorithm pushes your content
- Engage with comments immediately after posting to boost engagement signals
- Schedule content in advance so you never miss a posting window

Content Batching

The most efficient operators batch their work. Generating content, writing captions, and scheduling should be done in dedicated sessions — not scrambled together daily.

- Generate images in batches (10-20 per session using Seedream 4.5 and Nano Banana 2)
- Write all captions in advance for the entire week
- Pre-plan Threads posts in a notes app
- Generate and edit Kling video clips in batches
- Always have 2 weeks of content ready ahead of your posting schedule
- One content generation day per week keeps the pipeline full

> **IMAGE PLACEHOLDER**
>
> Weekly content calendar template: 7-day grid with rows for each platform (Instagram Reels, Stories, Carousels, Threads, TikTok, Reddit, Twitter). Show posting frequency in each cell.

END SUMMARY

- Consistency is the #1 growth factor — never miss more than 2 days in a row on any platform
- The 3-second hook (face, eye contact, movement) determines if viewers become followers
- Use proven hook formats: POV, question, reveal, trending audio, compliment bait, hot take
- Profile optimization converts viewers to followers — first 3 grid posts and bio matter most
- Track the right metrics: saves, shares, reach from non-followers, and profile visits — not likes
- Geo target USA/UK/Canada/Australia — organic signals outperform paid promotion for audience correction
- Do not boost posts for geo correction — it brings low-quality followers who never convert
- Scale only when the first page is profitable for 2+ months and your pipeline can handle it
- Each new persona needs its own device, phone number, email, and IP — complete isolation, no exceptions
