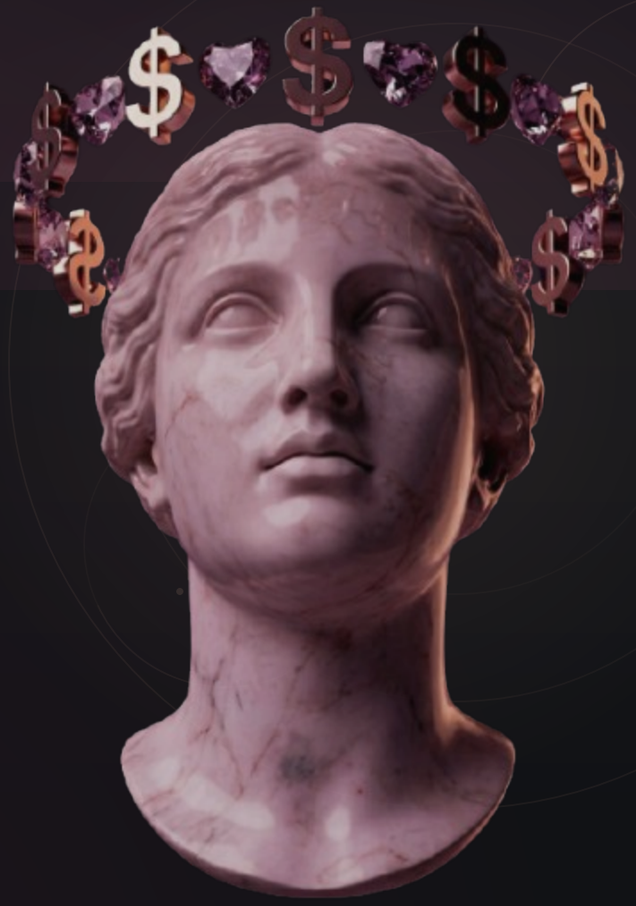
Module 3
SFW Image Creation

Learn How to Generate SFW Images from Reference Images

AI INFLUENCER METHOD | OUR DISCORD



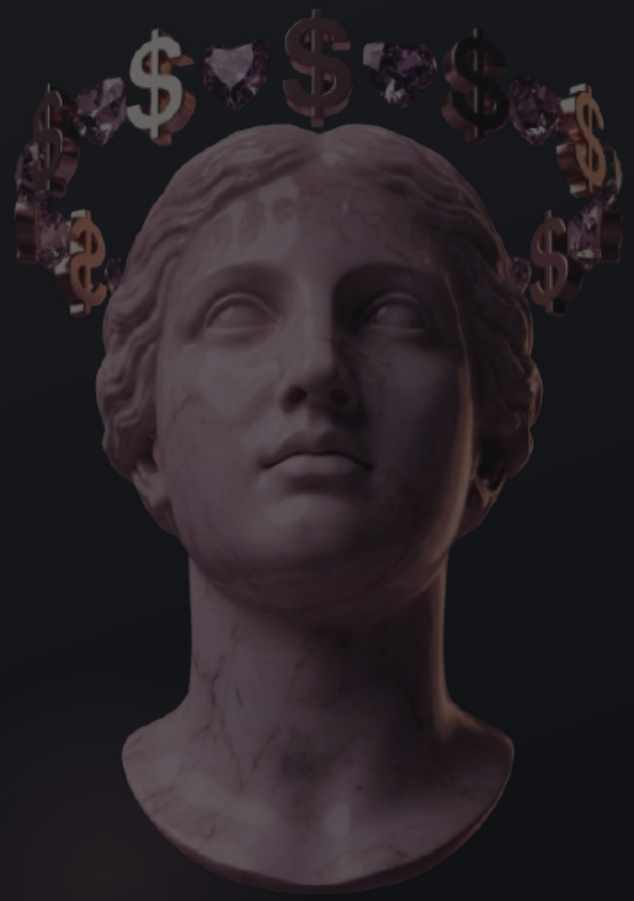
COURSE OUTLINE

Table Of Contents

01 Lesson 1: Reference Image Workflow

02 Lesson 2: Prompt Engineering & Editing AI Images

03 Lesson 3: Platform-Specific Image Rules



All materials are strictly protected under AI Influencer Method® rights

LESSON 1: REFERENCE IMAGE WORKFLOW

The reference image workflow is the backbone of your content pipeline. Instead of writing prompts from scratch and hoping for good results, you find real photos that have the exact pose, lighting, and setting you want — then you recreate them with your AI model. This is how you produce content that looks like a real photoshoot, not random AI generations.

Nano Banana 2 is your main tool for all SFW image generation. The workflow is simple: find a reference image on Pinterest, generate a JSON prompt from it, then feed that JSON prompt into Nano Banana 2 along with your base model image. The output matches the reference image's pose and lighting — but with your AI model's face and body.

The Reference Workflow

- → Find a reference image on Pinterest with the pose, lighting, and setting you want
- → Generate a JSON prompt from that reference image
- → Feed the JSON prompt into Nano Banana 2 along with your base model image
- → Nano Banana 2 generates an image that copies the pose and lighting from the reference — but with your AI model
- → Generate at least 3 outputs and compare — pick the one that best matches your model's face
- → If the face drifts, regenerate — do not settle for inconsistent results

Finding Good Reference Images

- Pinterest is your main source — search for poses, outfits, and settings you want to recreate
- Look for images with clear lighting and simple backgrounds — these produce the best results
- Save references into categories (casual, glam, gym, selfie, etc.) so you always have ideas ready
- The better the reference image, the better your output — do not use blurry or cluttered photos

Common Mistakes in Reference Workflow

- Using blurry or low-quality reference images from Pinterest — find clean, well-lit photos
- Picking reference poses that are too complex — start with simple, natural poses
- Ignoring face drift on 'almost good enough' images — never post a drifted face
- Only generating one version — always generate at least 3 and pick the best
- Not saving your working JSON prompts — keep a library of prompts that produce good results

LESSON 2: PROMPT ENGINEERING & EDITING AI IMAGES

Your prompt is everything. The same reference image with a bad prompt produces unusable results. A great prompt produces content that looks like a real photoshoot. This lesson covers how to write prompts that consistently produce natural, platform-safe images. A well-crafted prompt saves hours of regeneration.

All materials are strictly protected under AI Influencer Method® rights

Prompt Structure

Every prompt should follow this structure. Missing any component leads to random or unusable results.

- Subject description (handled by reference image — keep light)
- Setting/background (indoor, outdoor, studio, cafe, car, gym, etc.)
- Outfit/clothing description (specific helps: 'white sundress' not 'nice outfit')
- Lighting and mood (natural light, golden hour, soft studio, overhead gym)
- Camera angle and framing (selfie, portrait, full body, mirror shot)
- Style keywords (photorealistic, candid, editorial, iPhone quality, raw)

> **IMAGE PLACEHOLDER**
>
> Annotated prompt example showing each component color-coded: [Setting] + [Outfit] + [Lighting] + [Camera Angle] + [Style]. Each segment highlighted in a different color with labels.

10 Proven Prompt Examples

These prompts are tested and produce consistent, platform-safe results. Use them as starting points and adjust for your persona.

> **GOOD EXAMPLE:**
>
> *1. 'Young woman in white sundress at outdoor cafe, golden hour, candid smile at camera, photorealistic'*
>
> *2. 'Close-up selfie in bathroom mirror, messy bun, no makeup look, soft morning light, iPhone quality'*
>
> *3. 'Full body shot in gym, grey workout outfit, overhead lighting, confident stance, candid feel'*
>
> *4. 'Sitting on bed in oversized t-shirt, warm bedside lamp light, relaxed pose, looking down at phone, photorealistic'*
>
> *5. 'Walking on city street, casual jeans and crop top, natural afternoon light, candid mid-stride, street photography style'*

> **GOOD EXAMPLE:**
>
> *6. 'Beach sunset, swimsuit, golden hour backlight, hair blowing in wind, looking over shoulder, photorealistic'*
>
> *7. 'Car selfie, front seat, casual top, natural daylight from window, slight smile, iPhone selfie style'*
>
> *8. 'Couch with coffee mug, oversized sweater, rainy window background, cozy mood lighting, candid reading pose'*
>
> *9. 'Restaurant dinner table, black dress, ambient warm lighting, leaning forward, soft eye contact with camera'*
>
> *10. 'Bedroom mirror selfie, casual loungewear, evening lamp lighting, relaxed standing pose, photorealistic'*

BAD EXAMPLE:

Bad prompts:
'Beautiful girl photo' — Too vague, no direction
'Hot model posing sexy' — Too generic, produces AI-looking results
'Woman' — Produces random, unusable output

All bad prompts share the same problem: no specific setting, lighting, outfit, or style direction.

The Prompt Template Method

Do not write prompts from scratch every time. Create templates that work and swap out the variables. This is how professional operators generate dozens of images efficiently.

GOOD EXAMPLE:

```
{
"prompt_modifiers": ["character from reference images"],
"image_type": "outdoor fashion street portrait",
"composition": {
"framing": "vertical orientation, mid-thigh crop",
"camera_angle": "eye-level perspective",
"perspective": "standard wide smartphone or mirrorless lens perspective with natural proportions",
"pose": "character from reference images walking forward on city sidewalk, torso facing camera, one arm holding structured handbag, the other relaxed by side",
"crop": "centered composition with architectural framing elements on both sides",
"depth_of_field": "moderate depth of field with subject in sharp focus and softly blurred storefront background"
},
"subject": {
"type": "human",
"representation": "character from reference images",
"wardrobe": "blue and white gingham short-sleeve button-up top with fitted waist and lace trim hem, matching mini skirt with lace trim and small bow detail, large brown structured suede handbag",
"expression": "composed, neutral expression with soft direct gaze slightly off-camera",
"gesture": "mid-stride posture holding handbag with relaxed arm positioning"
},
"environment": {
"location_type": "urban street setting",
"elements": ["storefront windows with reflective glass", "dark stone building facade", "display case inset in wall", "paved sidewalk with linear stone pattern"],
"style": "luxury shopping district or upscale city street"
},
"lighting": {
"source": "natural direct sunlight",
"direction": "front-side lighting from upper left",
"quality": "bright, directional sunlight creating defined shadows",
"color_temperature": "warm daylight (~5600K)",
"shadows": "soft but visible shadow outlines on ground and subtle contour shadows on subject",
```

All materials are strictly protected under AI Influencer Method® rights

"highlight_behavior": "bright highlights on hair and skin with warm glow effect"
},
"color_palette": {
"dominant_colors": ["blue", "white", "warm beige", "brown", "charcoal gray"],
"contrast_level": "medium to high contrast due to sunlight",
"saturation": "moderate saturation with warm tonal emphasis",
"tone_curve": "clean contrast curve with bright highlights and defined midtones"
},
"technical_characteristics": {
"camera_type": "smartphone or compact mirrorless camera",
"focal_length_equivalent": "28-35mm equivalent",
"aperture_estimate": "f/2.8-f/4 equivalent",
"iso_estimate": "low ISO (100-200)",
"shutter_speed_estimate": "fast shutter speed for daylight exposure",
"white_balance": "daylight white balance setting",
"sharpness": "high overall sharpness with clear fabric texture detail",
"grain": "no visible noise"
},
"artistic_elements": {
"aesthetic": "chic European summer street style aesthetic",
"mood": "confident, polished, effortless",
"stylistic_influences": ["luxury street fashion photography", "influencer editorial lifestyle imagery"],
"retouching": "subtle skin smoothing and color grading with warm glow enhancement",
"texture_rendering": "crisp textile pattern visibility and suede bag texture detail"
},
"background": {
"depth": "layered urban depth with storefront reflections adding dimensionality",
"clutter_level": "minimal visual clutter, clean architectural backdrop",
"separation": "subject separation achieved through depth of field and tonal contrast"
},
"typography": { "present": false }
}

> **PRO TIP**
> Keep a prompt document. When you find a prompt that produces consistently good results, save it. Swap out the setting and outfit details for each new batch. This saves time and maintains quality. Over time you will build a library of 20-30 proven templates.

Raw AI outputs are rarely perfect. Even the best generations need minor editing before they are ready to post. This lesson covers what to look for, how to fix common issues, and the critical trick that makes AI images pass as real photos. Skipping the editing step is how pages get exposed as AI.

Common Issues to Fix

- Extra or distorted fingers/hands — the most common AI artifact
- Asymmetric facial features — one eye larger or different height
- Text or watermark artifacts in background — AI loves generating fake text
- Unnatural skin smoothing or plastic shine — too perfect is too fake
- Weird jewelry, accessories, or clothing seams that break reality
- Background inconsistencies — impossible geometry, blending errors, floating objects

Editing Workflow

- → Step 1: Inspect hands and fingers first (most common issue)
- → Step 2: Check face symmetry and eye alignment
- → Step 3: Scan background for text, artifacts, or impossible geometry
- → Step 4: Adjust color grading for natural skin tones
- → Step 5: Add approximately 2% grain/noise for realism (critical step)
- → Step 6: Crop or reframe for platform-specific aspect ratios
- → Step 7: Export at appropriate resolution

Editing Tools (Free Options)

- Photopea (photopea.com) — Free browser-based Photoshop alternative. Handles everything you need
- GIMP — Free desktop app for advanced editing
- Canva — Basic cropping, filters, and text overlay
- Snapseed — Mobile editing for quick adjustments
- For most editing tasks, Photopea is all you need

> **IMAGE PLACEHOLDER**
> Before/after examples of common AI artifacts being fixed: distorted hand corrected, background text removed, skin smoothing reduced, asymmetric eyes fixed

The Grain Trick — Critical

This is the single most important editing technique in this entire course. Raw AI images look too clean, too smooth, too perfect. Real photos from phones have subtle grain and noise. Adding approximately 2% grain in your editing tool makes AI images pass as real.

- In Photopea: Filter → Noise → Add Noise → set to 2-3%, Gaussian, Monochromatic
- This simulates camera sensor noise that exists in every real photo
- Without grain, experienced eyes can spot AI images immediately
- The difference is subtle but it is the difference between 'this looks real' and 'this looks AI'
- Apply grain as the very last step before export

> **IMAGE PLACEHOLDER**
> Side by side comparison: Raw AI output (too smooth, no grain, plastic-looking) vs Edited output (grain added, color corrected, natural-looking). Label the differences clearly.

Nano Banana 2 Edit Feature — Fixing Specific Areas

When a generated image is almost perfect but has one bad area (a distorted hand, a weird background element), use the edit feature in Nano Banana 2 to fix just that area without regenerating the entire image.

- Use the edit feature in Nano Banana 2 to select the problem area
- Write a prompt describing what should be in that area
- Nano Banana 2 regenerates only the selected region while keeping everything else
- This saves images that would otherwise be rejected entirely
- Use it for: hands, background artifacts, clothing seams, jewelry errors

> **RULE**
> Do not over-edit. The goal is to fix obvious AI artifacts and add grain, not to create a heavily processed image. Over-edited photos look fake in a different way. Fix the problems, add grain, and stop. Natural-looking beats polished-looking every time.

LESSON 3: PLATFORM-SPECIFIC IMAGE RULES

Each platform has different content guidelines. What works on Reddit will get you banned on Instagram. Understanding what is 'safe' per platform prevents account strikes and keeps your content flowing without interruption. One wrong post can shadowban your account for weeks. Know the rules before you post.

Instagram (Strictest)

- No nudity, implied or explicit — zero tolerance
- No underwear as primary clothing (bras/panties as the outfit)
- Cleavage must be modest and natural — no extreme push-up
- Swimwear is allowed in context (beach, pool settings only)
- No sexual poses or suggestive hand placement
- No sexual captions or innuendo in text
- AI-generated content is increasingly flagged — realism is critical

TikTok (Strict)

- Similar rules to Instagram, often stricter enforcement
- Carousels and photo content are the safest format
- Avoid anything that could be flagged as 'adult content'
- When in doubt, keep it casual and fully clothed
- TikTok's moderation is faster and harsher than Instagram's
- One content strike can shadow your account for weeks

Reddit (Most Flexible)

- Rules vary dramatically by subreddit — always read before posting
- SFW subreddits still require tasteful, appropriate content
- Some SFW subs allow swimwear, others do not
- NSFW subreddits have their own specific content rules
- Mark your profile as NSFW in settings before any NSFW posting
- Moderators are human and strict — one violation can get you permanently banned from a subreddit

Twitter/X (Flexible)

- More lenient than Instagram overall
- SFW content actually performs better for discovery and growth
- Mark sensitive content appropriately in media settings
- Keep main feed clean — use the sensitive content flag for anything borderline
- Explicit content is allowed but must be properly marked

IMAGE PLACEHOLDER

Platform safety scale: horizontal gradient from 'Strictest' to 'Most Flexible'. Left: TikTok → Instagram → Threads → Twitter/X → Reddit. Show what's allowed at each level with checkmark and X icons for content types.

All materials are strictly protected under AI Influencer Method® rights

Threads (Moderate)

- Linked to Instagram — violations can affect your IG account
- Text-based posts are safest for Threads
- Optional photo attachments should be SFW casual only
- No explicit images, no suggestive poses in attached photos
- Keep it conversational — Threads is for personality, not photos

The 'When In Doubt' Decision Process

- Is the outfit something you would see at a mall? → Safe for Instagram/TikTok
- Is there visible underwear as the main outfit? → Not safe for Instagram
- Would this photo make you uncomfortable if your boss saw it? → Borderline — test with a trial post first
- Could this be interpreted as sexual? → Do not post on Instagram or TikTok

> **GOLDEN RULE**
>
> When in doubt, keep it safe. One content strike on Instagram can shadow your account for weeks. It is always better to post something slightly too modest than to risk a ban. You can always push boundaries gradually once trust is established — you cannot undo a strike.

END SUMMARY

- Always generate new images using your base model as a reference in Nano Banana 2
- Write detailed prompts with setting, lighting, outfit, and camera angle — save templates that produce good results
- Use Photopea (free) to export Instagram carousels — this helps avoid the AI filter on Instagram
- Always add approximately 2% grain/noise as the final editing step — this is what makes AI images pass as real photos
- Use the edit feature in Nano Banana 2 to fix specific problem areas without regenerating the entire image
- Know each platform's content rules — TikTok and Instagram are strictest, Reddit is most flexible
- When in doubt, keep it safe — a content strike can derail weeks of progress
