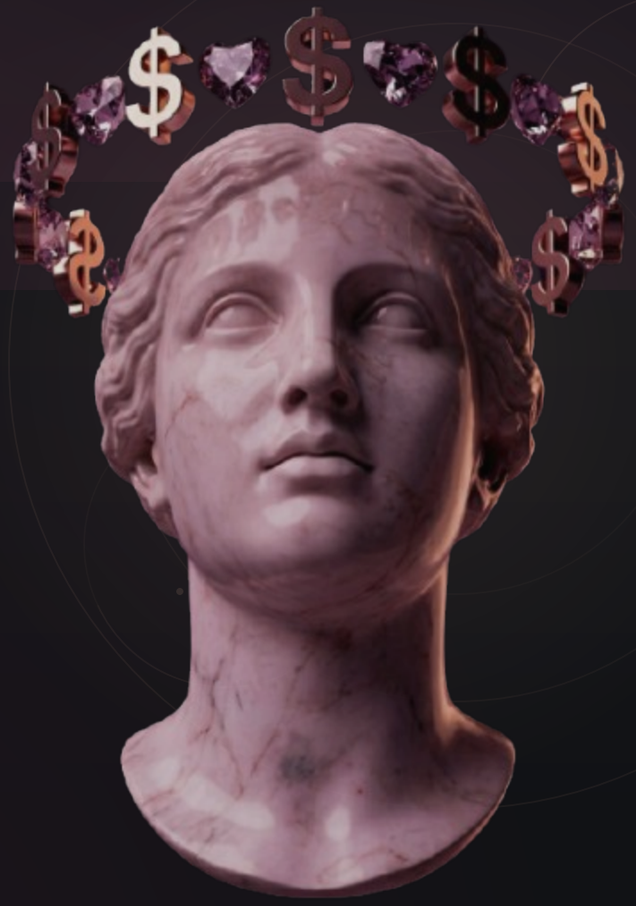
Module 3
SFW Image Creation

Learn How to Generate SFW Images from Reference Images

AI INFLUENCER METHOD | OUR DISCORD



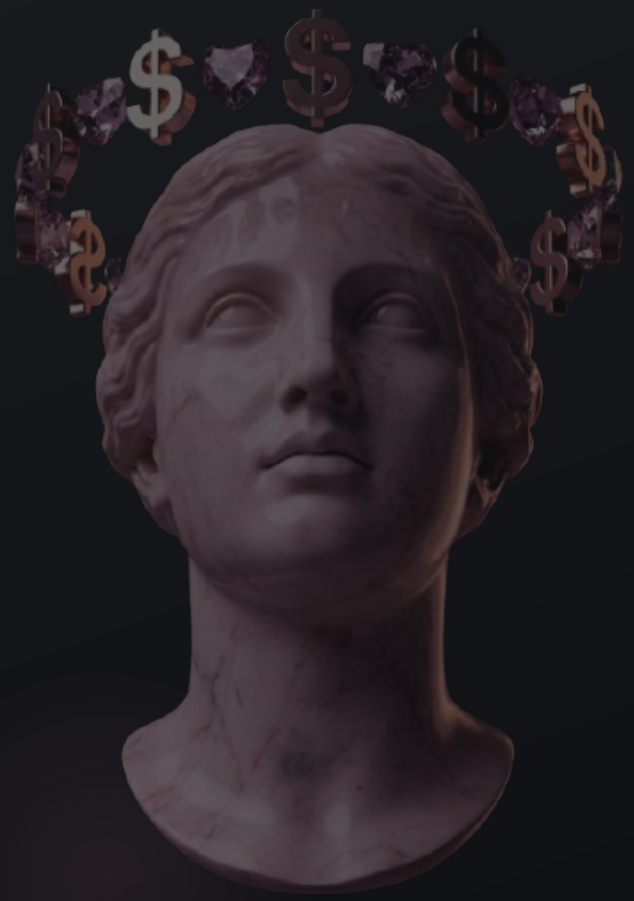
COURSE OUTLINE

Table Of Contents

01 Lesson 1: Reference Image Workflow

02 Lesson 2: Prompt Engineering & Editing AI Images

03 Lesson 3: Platform-Specific Image Rules



All materials are strictly protected under AI Influencer Method® rights

LESSON 1: REFERENCE IMAGE WORKFLOW

Once you have your base model from Module 2, every new image you create should be generated using that base as a reference. This is how you maintain consistency across hundreds of images. The reference image workflow is the backbone of your content pipeline. Without it, every image looks like a different person and your page screams fake.

Nano Banana 2 is your main tool for all SFW image generation. It supports reference-based generation — you upload your seed image, write a prompt describing the new scene, and it generates output that preserves your character's face while creating the new content. This lesson covers how to use this workflow effectively.

The Reference Workflow

- → Start with your locked-in seed image from Module 2
- → Upload it as a reference/input image in Nano Banana 2
- → Write a new prompt describing the desired scene, outfit, or setting
- → Generate at least 3 outputs per prompt and compare against the reference
- → Only keep images that match the face consistently
- → If the face drifts, increase reference strength or try a different seed angle

Reference Image Best Practices

- Always use both your face and body reference images together
- Higher resolution reference images produce better consistency
- Never change your reference image once your page is live
- Adjust reference strength if the face drifts — higher strength means more consistency but less variety

Common Mistakes in Reference Workflow

- Using a low-quality or small reference image — always use full resolution
- Setting reference strength too low — face drifts from your model
- Setting reference strength too high — every image looks identical (no variety)
- Ignoring face drift on 'almost good enough' images — never post a drifted face
- Changing reference images between sessions — stick with the same seed
- Only generating one version — always generate at least 3 and pick the best

LESSON 2: PROMPT ENGINEERING & EDITING AI IMAGES

Your prompt is everything. The same reference image with a bad prompt produces unusable results. A great prompt produces content that looks like a real photoshoot. This lesson covers how to write prompts that consistently produce natural, platform-safe images. A well-crafted prompt saves hours of regeneration.

All materials are strictly protected under AI Influencer Method® rights

Prompt Structure

Every prompt should follow this structure. Missing any component leads to random or unusable results.

- Subject description (handled by reference image — keep light)
- Setting/background (indoor, outdoor, studio, cafe, car, gym, etc.)
- Outfit/clothing description (specific helps: 'white sundress' not 'nice outfit')
- Lighting and mood (natural light, golden hour, soft studio, overhead gym)
- Camera angle and framing (selfie, portrait, full body, mirror shot)
- Style keywords (photorealistic, candid, editorial, iPhone quality, raw)

>
> Annotated prompt example showing each component color-coded: [Setting] + [Outfit] + [Lighting] + [Camera Angle] + [Style]. Each segment highlighted in a different color with labels.

10 Proven Prompt Examples

These prompts are tested and produce consistent, platform-safe results. Use them as starting points and adjust for your persona.

> **GOOD EXAMPLE:**
>
> *1. 'Young woman in white sundress at outdoor cafe, golden hour, candid smile at camera, photorealistic'*
>
> *2. 'Close-up selfie in bathroom mirror, messy bun, no makeup look, soft morning light, iPhone quality'*
>
> *3. 'Full body shot in gym, grey workout outfit, overhead lighting, confident stance, candid feel'*
>
> *4. 'Sitting on bed in oversized t-shirt, warm bedside lamp light, relaxed pose, looking down at phone, photorealistic'*
>
> *5. 'Walking on city street, casual jeans and crop top, natural afternoon light, candid mid-stride, street photography style'*

> **GOOD EXAMPLE:**
>
> *6. 'Beach sunset, swimsuit, golden hour backlight, hair blowing in wind, looking over shoulder, photorealistic'*
>
> *7. 'Car selfie, front seat, casual top, natural daylight from window, slight smile, iPhone selfie style'*
>
> *8. 'Couch with coffee mug, oversized sweater, rainy window background, cozy mood lighting, candid reading pose'*
>
> *9. 'Restaurant dinner table, black dress, ambient warm lighting, leaning forward, soft eye contact with camera'*
>
> *10. 'Bedroom mirror selfie, casual loungewear, evening lamp lighting, relaxed standing pose, photorealistic'*

BAD EXAMPLE:

Bad prompts:
'Beautiful girl photo' — Too vague, no direction
'Hot model posing sexy' — Too generic, produces AI-looking results
'Woman' — Produces random, unusable output

All bad prompts share the same problem: no specific setting, lighting, outfit, or style direction.

The Prompt Template Method

Do not write prompts from scratch every time. Create templates that work and swap out the variables. This is how professional operators generate dozens of images efficiently.

GOOD EXAMPLE:

Template: '[setting], [outfit], [lighting], [pose/angle], photorealistic, candid feel'

Swap variables:
Cafe: 'Outdoor cafe table, white sundress, golden hour natural light, looking at camera with soft smile, photorealistic, candid'

Gym: 'Gym mirror, grey sports bra and leggings, overhead fluorescent lighting, post-workout selfie, photorealistic, iPhone quality'

Home: 'Living room couch, oversized hoodie, warm lamp lighting, relaxed sitting pose, photorealistic, casual candid'

PRO TIP

Keep a prompt document. When you find a prompt that produces consistently good results, save it. Swap out the setting and outfit details for each new batch. This saves time and maintains quality. Over time you will build a library of 20-30 proven templates.

Raw AI outputs are rarely perfect. Even the best generations need minor editing before they are ready to post. This lesson covers what to look for, how to fix common issues, and the critical trick that makes AI images pass as real photos. Skipping the editing step is how pages get exposed as AI.

All materials are strictly protected under AI Influencer Method® rights

Common Issues to Fix

- Extra or distorted fingers/hands — the most common AI artifact
- Asymmetric facial features — one eye larger or different height
- Text or watermark artifacts in background — AI loves generating fake text
- Unnatural skin smoothing or plastic shine — too perfect is too fake
- Weird jewelry, accessories, or clothing seams that break reality
- Background inconsistencies — impossible geometry, blending errors, floating objects

Editing Tools (Free Options)

- Photopea (photopea.com) — Free browser-based Photoshop alternative. Handles everything you need
- GIMP — Free desktop app for advanced editing
- Canva — Basic cropping, filters, and text overlay
- Snapseed — Mobile editing for quick adjustments
- For most editing tasks, Photopea is all you need

> **IMAGE PLACEHOLDER**
>
> Before/after examples of common AI artifacts being fixed: distorted hand corrected, background text removed, skin smoothing reduced, asymmetric eyes fixed

Editing Workflow

- → Step 1: Inspect hands and fingers first (most common issue)
- → Step 2: Check face symmetry and eye alignment
- → Step 3: Scan background for text, artifacts, or impossible geometry
- → Step 4: Adjust color grading for natural skin tones
- → Step 5: Add approximately 2% grain/noise for realism (critical step)
- → Step 6: Crop or reframe for platform-specific aspect ratios
- → Step 7: Export at appropriate resolution

The Grain Trick — Critical

This is the single most important editing technique in this entire course. Raw AI images look too clean, too smooth, too perfect. Real photos from phones have subtle grain and noise. Adding approximately 2% grain in your editing tool makes AI images pass as real.

- In Photopea: Filter → Noise → Add Noise → set to 2-3%, Gaussian, Monochromatic
- This simulates camera sensor noise that exists in every real photo
- Without grain, experienced eyes can spot AI images immediately
- The difference is subtle but it is the difference between 'this looks real' and 'this looks AI'
- Apply grain as the very last step before export

> **IMAGE PLACEHOLDER**
>
> Side by side comparison: Raw AI output (too smooth, no grain, plastic-looking) vs Edited output (grain added, color corrected, natural-looking). Label the differences clearly.

Inpainting — Fixing Specific Areas

When a generated image is almost perfect but has one bad area (a distorted hand, a weird background element), inpainting lets you regenerate just that area without redoing the entire image.

- Select the problem area using your generation tool's inpainting feature
- Write a prompt describing what should be in that area
- The tool regenerates only the selected region while keeping everything else
- This saves images that would otherwise be rejected entirely
- Use inpainting for: hands, background artifacts, clothing seams, jewelry errors

> **RULE**
>
> Do not over-edit. The goal is to fix obvious AI artifacts and add grain, not to create a heavily processed image. Over-edited photos look fake in a different way. Fix the problems, add grain, and stop. Natural-looking beats polished-looking every time.

LESSON 3: PLATFORM-SPECIFIC IMAGE RULES

Each platform has different content guidelines. What works on Reddit will get you banned on Instagram. Understanding what is 'safe' per platform prevents account strikes and keeps your content flowing without interruption. One wrong post can shadowban your account for weeks. Know the rules before you post.

Instagram (Strictest)

- No nudity, implied or explicit — zero tolerance
- No underwear as primary clothing (bras/panties as the outfit)
- Cleavage must be modest and natural — no extreme push-up
- Swimwear is allowed in context (beach, pool settings only)
- No sexual poses or suggestive hand placement
- No sexual captions or innuendo in text
- AI-generated content is increasingly flagged — realism is critical

TikTok (Strict)

- Similar rules to Instagram, often stricter enforcement
- Carousels and photo content are the safest format
- Avoid anything that could be flagged as 'adult content'
- When in doubt, keep it casual and fully clothed
- TikTok's moderation is faster and harsher than Instagram's
- One content strike can shadow your account for weeks

Reddit (Most Flexible)

- Rules vary dramatically by subreddit — always read before posting
- SFW subreddits still require tasteful, appropriate content
- Some SFW subs allow swimwear, others do not
- NSFW subreddits have their own specific content rules
- Mark your profile as NSFW in settings before any NSFW posting
- Moderators are human and strict — one violation can get you permanently banned from a subreddit

Twitter/X (Flexible)

- More lenient than Instagram overall
- SFW content actually performs better for discovery and growth
- Mark sensitive content appropriately in media settings
- Keep main feed clean — use the sensitive content flag for anything borderline
- Explicit content is allowed but must be properly marked

IMAGE PLACEHOLDER

Platform safety scale: horizontal gradient from 'Strictest' to 'Most Flexible'. Left: TikTok → Instagram → Threads → Twitter/X → Reddit. Show what's allowed at each level with checkmark and X icons for content types.

All materials are strictly protected under AI Influencer Method® rights

Threads (Moderate)

- Linked to Instagram — violations can affect your IG account
- Text-based posts are safest for Threads
- Optional photo attachments should be SFW casual only
- No explicit images, no suggestive poses in attached photos
- Keep it conversational — Threads is for personality, not photos

The 'When In Doubt' Decision Process

- Is the outfit something you would see at a mall? → Safe for Instagram/TikTok
- Is there visible underwear as the main outfit? → Not safe for Instagram
- Would this photo make you uncomfortable if your boss saw it? → Borderline — test with a trial post first
- Could this be interpreted as sexual? → Do not post on Instagram or TikTok

> **GOLDEN RULE**
>
> When in doubt, keep it safe. One content strike on Instagram can shadow your account for weeks. It is always better to post something slightly too modest than to risk a ban. You can always push boundaries gradually once trust is established — you cannot undo a strike.

END SUMMARY

- Always generate new images using your base model as a reference in Nano Banana 2
- Write detailed prompts with setting, lighting, outfit, and camera angle — save templates that produce good results
- Edit AI outputs to fix hands, artifacts, and background issues using Photopea (free)
- Always add approximately 2% grain/noise as the final editing step — this is what makes AI images pass as real photos
- Use inpainting to fix specific problem areas without regenerating the entire image
- Know each platform's content rules — TikTok and Instagram are strictest, Reddit is most flexible
- When in doubt, keep it safe — a content strike can derail weeks of progress
