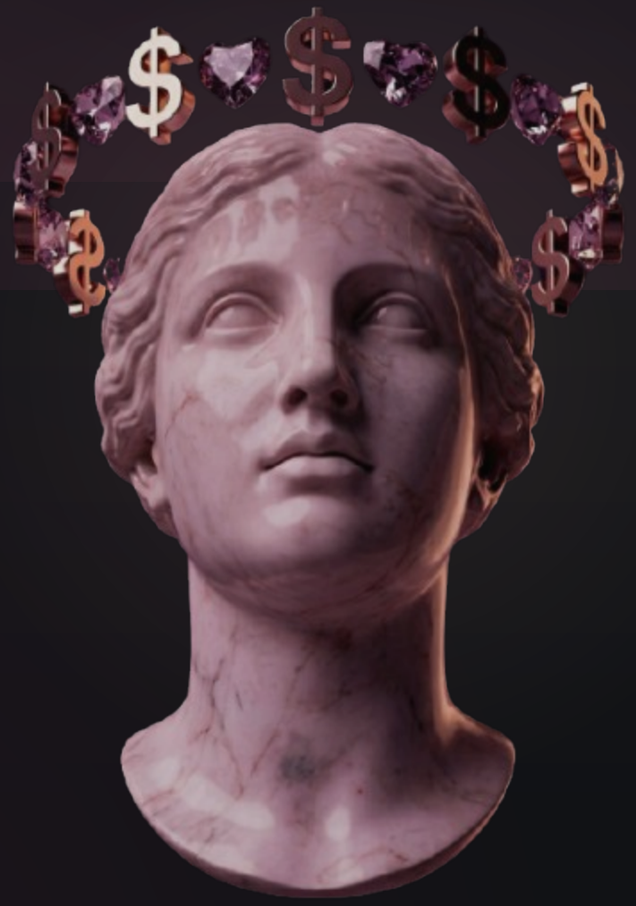
LESSON 1

Introduction to AI Video with Kling

Learn Motion Control with Kling and How to Generate Video Prompts

AI INFLUENCER METHOD



LESSON 1: INTRODUCTION TO AI VIDEO WITH KLING

Video content dramatically increases engagement and reach on every platform. Kling is an AI video generation tool that takes your static images and turns them into realistic video clips with motion, expressions, and camera movement. This is how you bring your AI model to life.

Why Video Matters

- Instagram Reels and TikTok prioritize video in discovery
- Video makes your AI persona feel real and alive
- Moving content stops the scroll far more than static images
- Even short 3-5 second clips massively boost engagement
- Video content converts followers to subscribers faster

What Kling Can Do

- Turn a single image into a short video clip
- Add natural motion: hair movement, blinking, head turns
- Control camera movement: pan, zoom, tracking
- Generate lip sync and facial expressions
- Produce videos in multiple aspect ratios

When to Use Video

- Instagram Reels (primary use case)
- TikTok posts
- Instagram Stories for 'casual' feel
- Fanvue content to increase perceived value
