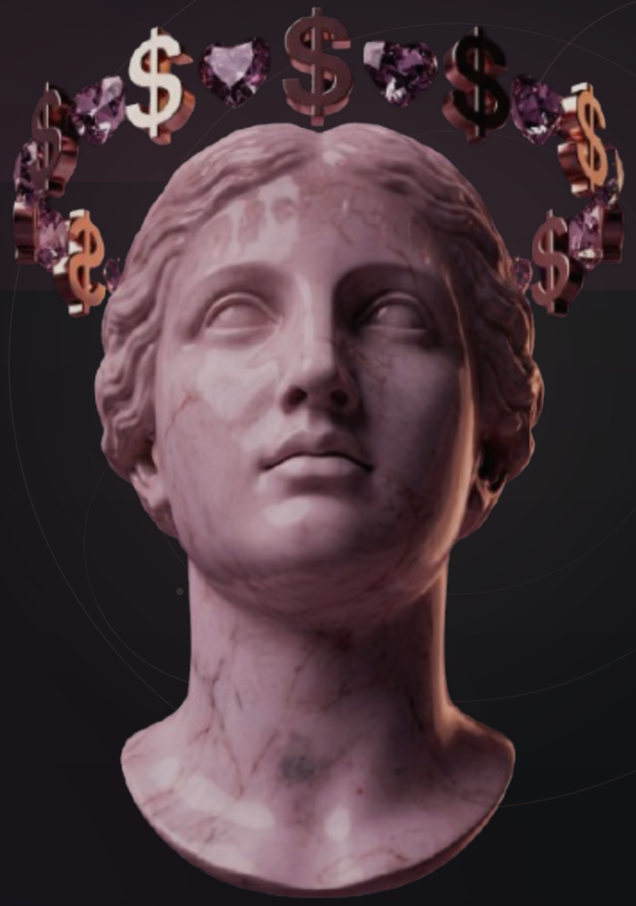
MODULE 8
LESSON 4

Multi-Account Safety Rules

Learn the essentials of multi-account safety rules

AI INFLUENCER METHOD | OUR DISCORD



LESSON 4: MULTI-ACCOUNT SAFETY RULES

Running multiple accounts is the highest-risk activity in this business. Platforms are designed to detect multi-account operations. One mistake can cascade and take down all your accounts simultaneously. These rules are absolute and non-negotiable.

Device Separation (Non-Negotiable)

- One phone per persona (ideal and safest)
- Max 2 accounts per device (absolute maximum — still risky)
- TikTok: max 3 accounts per device
- Never log into two personas in the same app session
- Never switch between accounts rapidly — wait 30+ minutes between logins
- Factory reset devices completely if reusing hardware for a new persona

IP & Network Separation

- Each persona should use a different IP address
- Use mobile data (different SIM) or separate VPN/proxy profiles
- Never access two personas from the same WiFi network at the same time
- Keep VPN locations consistent per persona — do not jump between cities
- Residential or mobile proxies are safest for multi-account operations
- Ensure timezone matches your IP geolocation (timezone mismatch is a detection signal)

Identity Separation

- Each persona gets a unique email address
- Each persona gets a unique phone number
- Never cross-follow between your own accounts
- Never share links between your own accounts
- Never mention one persona from another
- Different content niches, posting schedules, and caption styles

What Gets Multi-Accounts Caught

- Same IP address across accounts (most common cause)
- Same device fingerprint (IMEI, browser fingerprint, etc.)
- Cross-following between your own accounts
- Identical posting patterns (same times, same hashtags, same caption style)
- Shared link-in-bio URLs across accounts
- Logging into multiple accounts from one device in rapid succession
- Synchronized activity patterns (all accounts post at the same time daily)

> **NUCLEAR RULE**
>
> If one account gets banned, do NOT access your other accounts from the same device or IP for at least 72 hours. A ban investigation can cascade to linked accounts. Quarantine immediately. This is the single most important multi-account safety rule.

Proactive Account Health Monitoring

- Check Instagram Account Status (Settings → Account → Account Status) weekly
- Check Twitter/X shadowban status weekly using shadowban.yuzurisa.com
- Monitor reach metrics on all platforms daily — any sudden drop signals trouble
- Set calendar reminders for weekly health checks on all accounts
- Keep a log of any platform warnings or content removals per account

END SUMMARY

- Instagram's 2025 AI moderation shift permanently changed the landscape — prepare for flagging and have backups
- Shadowbans are invisible — monitor reach from non-followers daily to detect them early
- Prevention beats recovery: daily trust signals, safe content, and platform rate limits keep accounts healthy
- If shadowbanned: stop posting, go passive for 48-72 hours, resume at 50% frequency
- If permanently banned: start fresh with new device, new persona, new everything — rebuild smarter
- Device/IMEI bans affect ALL accounts on that phone — you may need a completely new device
- Always keep backup accounts warming up and content backed up locally and in the cloud
- Multi-account safety requires complete separation: device, IP, email, phone number — no exceptions
- If one account gets banned, quarantine all other accounts for 72 hours minimum
- Use appeal templates that are short, polite, and non-confrontational — never argue or threaten
