LESSON 2

Prompt Engineering for SFW Images

Learn How to Generate SFW Images from Reference Images

AI INFLUENCER METHOD

LESSON 2: PROMPT ENGINEERING FOR SFW IMAGES

Your prompt is everything. The same reference image with a bad prompt produces unusable results. A great prompt produces content that looks like a real photoshoot. This lesson covers how to write prompts that consistently produce natural, platform-safe images.

Prompt Structure

- Subject description (already handled by reference image)
- Setting/background (indoor, outdoor, studio, café, etc.)
- Outfit/clothing description
- Lighting and mood (natural light, golden hour, soft studio)
- Camera angle and framing (selfie, portrait, full body)
- Style keywords (photorealistic, candid, editorial)

Annotated prompt example showing each component highlighted

GOOD EXAMPLE:

Prompt: 'Young woman in a white sundress sitting at an outdoor café, golden hour lighting, candid pose, looking at camera with soft smile, iPhone selfie style, photorealistic'

BAD EXAMPLE:

Prompt: 'Beautiful girl photo'
(Too vague — no setting, lighting, or style direction. Results will be random and inconsistent.)

Side-by-side comparison: output from a good prompt vs output from a vague prompt

PRO TIP

Keep a prompt template document. When you find a prompt structure that works well, save it. Swap out the setting and outfit details for each new batch. This saves time and maintains quality.
