MODULE 3
LESSON 3

Editing & Refining AI Images

Learn How to Generate SFW Images from Reference Images

AI INFLUENCER METHOD

LESSON 3: EDITING & REFINING AI IMAGES

Raw AI outputs are rarely perfect. Even the best generations need minor editing before they are ready to post. This lesson covers what to look for and how to fix common issues without over-processing the image.

Common Issues to Fix

- Extra or distorted fingers/hands
- Asymmetric facial features
- Text or watermark artifacts in background
- Unnatural skin smoothing or shine
- Weird jewelry, accessories, or clothing seams
- Background inconsistencies or blending errors

Before/after examples of common AI artifacts being fixed

Editing Workflow

- → Inspect hands and fingers first (most common issue)
- → Check face symmetry and eye alignment
- → Scan background for text, artifacts, or impossible geometry
- → Adjust color grading for natural skin tones
- → Crop or reframe for platform-specific aspect ratios
- → Export at appropriate resolution

RULE

Do not over-edit. The goal is to fix obvious AI artifacts, not to create a heavily processed image. Over-edited photos look fake and reduce engagement.
