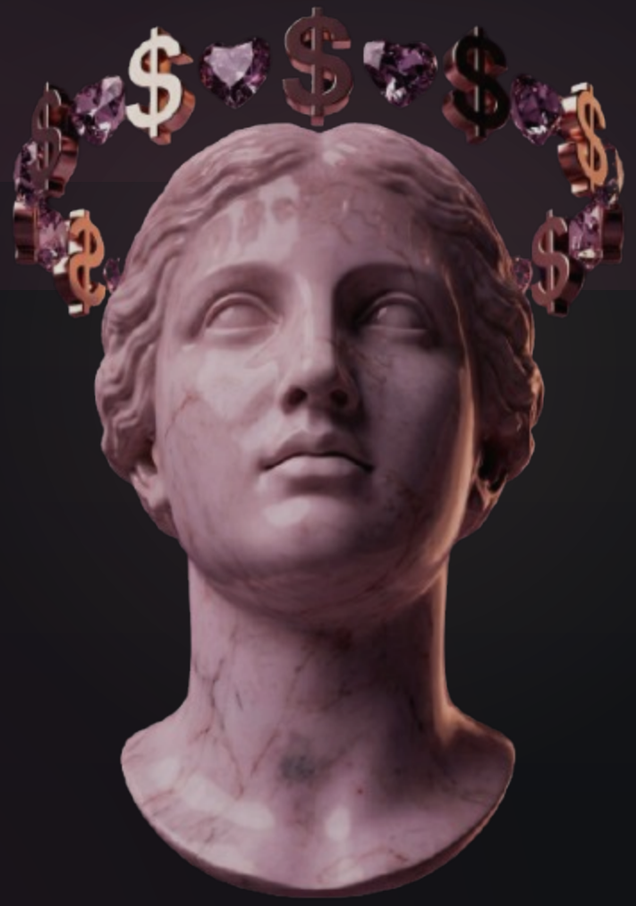
MODULE 2
LESSON 3

Ensuring Face & Style Consistency

Learn How to Generate Your Base Model Realistically and Efficiently

AI INFLUENCER METHOD



LESSON 3: ENSURING FACE & STYLE CONSISTENCY

Consistency is what separates a believable AI influencer from an obvious fake. Your audience will scroll through your page. If the face changes between posts, trust is destroyed instantly. This lesson covers how to lock in your model's look so every image looks like the same person.

The Reference Image Method

Both Seedream 4.5 and Nano Banana 2 support reference image workflows. This means you upload your seed image as a reference, and the tool uses it to maintain your character's face across new generations. This is the primary method for achieving consistency.

How the Reference Method Works

- → Start with your locked-in seed image from Lesson 2
- → Upload it as a reference input when generating new images
- → Write a new prompt describing the desired scene, outfit, or setting
- → The tool preserves the face from your reference while creating the new scene
- → Generate multiple outputs and compare against the reference
- → Only keep images that match the face consistently

Reference Image Best Practices

- Use a clear, front-facing headshot as your primary reference
- Keep 2-3 reference angles saved (front, 3/4 turn, profile) for variety
- Higher resolution reference images produce better consistency
- Never change your primary reference image once your page is live
- Adjust reference strength settings if the face drifts — higher strength means more consistency but less variety

IMAGE PLACEHOLDER

The reference workflow visualized: Seed Image uploaded → New prompt written → Tool generates new image with same face → Compare side by side → Approve or regenerate.

Face Swap as a Backup Method

If a generated image has a great body, pose, and setting but the face drifted slightly, face swapping can save it. This technique replaces the face in the generated image with your reference face.

- Generate the image with your desired scene and pose
- If the face drifts but the rest is good, use face swap to correct it
- Swap the face from your reference image onto the generated body
- Check that lighting and angle match naturally after the swap
- This is a correction tool, not your primary workflow — reference generation should be your default

Consistency Rules — What Must Stay Locked

- Face structure — jawline, cheekbones, nose shape, lip shape
- Body type and proportions
- Skin tone — must remain constant across all lighting
- Eye color — locked in from the start, never changes
- Core hair color (natural changes like highlights are acceptable)

What Can Vary Naturally

- Lighting and shadows (indoor vs outdoor, golden hour vs studio)
- Clothing and outfits (expected and creates content variety)
- Background and location (home, outdoors, gym, cafe)
- Makeup style (subtle changes only — not dramatic transformations)
- Camera angle and distance (selfie vs full body vs portrait)
- Hair styling (up, down, braided — same base color)

IMAGE PLACEHOLDER

Side-by-side grid showing the same AI model across 4-6 different settings. Annotate: same face structure, same skin tone, same eye color, different outfit, different background. Use checkmarks on consistent elements.

VISUAL CONSISTENCY CHECK

Before posting any image, place it next to your last 3 posts. If the face does not look like the same person at a glance, do not post it. Regenerate until it matches. This 5-second test saves you from destroying trust with your audience.
