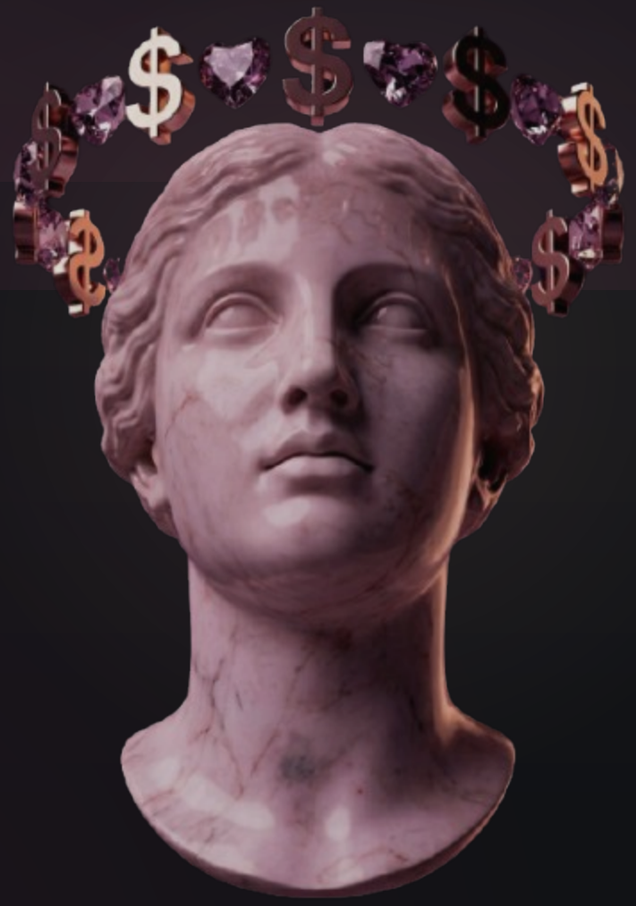
PREMIUM COURSE MATERIAL

MODULE 1

Overview

Course Overview and the Complete Basics to Starting AI Models

AI INFLUENCER METHOD



MODULE OVERVIEW

This module covers the complete foundation of the AI Influencer Method. You will understand what this business model is, why it works, how the revenue funnel operates, which platforms matter, and what tools you need before starting.

What You Will Learn

- Understand the AI Influencer business model end to end
- Know the revenue funnel from free content to paying subscribers
- Identify which platforms are mandatory vs optional
- Have a clear picture of the tools and resources needed to start

All materials are strictly protected under AI Influencer Method® rights

WHAT IS THE AI INFLUENCER METHOD

The AI Influencer Method is a system for building and monetizing social media pages using AI-generated personas. You create a fictional character — face, name, personality — using AI image and video tools, then grow that character's social media presence and convert followers into paying subscribers.

The persona looks and behaves like a real influencer. The audience follows for entertainment, attention, and content. You are running a media brand, not pretending to be a real person. The business works because the demand for parasocial content is massive and growing, and AI tools now produce output that is visually indistinguishable from real photos and videos.

How It Works

You generate a base AI model (a consistent face), then produce images and videos of that character in different settings, outfits, and scenarios. You post this content across social media platforms to build an audience, then funnel that audience toward a paid subscription where they access exclusive content.

Every part of the system is controlled by you: the face, the brand, the content schedule, and the revenue. There is no creator dependency, no contracts, and no negotiations. You own the entire operation.

Why It Works Now

- AI image tools (Seedream 4.5, Nano Banana 2) produce photorealistic output that passes as real
- AI video tools (Kling) generate natural-looking video clips from single images
- Social platforms reward high-volume, consistent content — AI delivers that at scale
- One operator can run the entire pipeline: generation, editing, posting, monetization
- Startup costs are under $500 — no studio, no equipment, no talent

THE REVENUE FUNNEL

Revenue does not come from posting content. It comes from moving people through a funnel. Each platform in this system has one job: push the audience one step closer to paying. No single platform generates money on its own — the system works as a connected chain.

The Five Funnel Stages

- → Stage 1: Discovery — Free content on Instagram, TikTok, Threads, Reddit draws attention
- → Stage 2: Follow — The viewer likes the content enough to follow the account
- → Stage 3: Click — The follower taps the link in your bio to see what else exists
- → Stage 4: Warm — The follower joins your free Telegram channel, sees teaser content, builds desire
- → Stage 5: Convert — The warmed follower subscribes to your paid platform for exclusive access

Every piece of content you create exists to move someone from one stage to the next. A Reel on Instagram is not the product — it is the advertisement. The subscription is the product.

Platform Roles in the Funnel

- → Instagram — Primary discovery and trust platform. Largest audience, highest conversion potential
- → Threads — Engagement engine that feeds Instagram's algorithm with activity
- → TikTok — Secondary discovery. Viral reach supplements Instagram growth
- → Reddit — Niche exposure inside specific communities. High intent traffic
- → Twitter/X — Brand presence and discovery through conversations and replies
- → Link in Bio — Bridge between free social media and paid conversion
- → Telegram — Warming layer. Followers see teaser content that builds desire before subscribing
- → Subscription Platform — Monetization endpoint where revenue is captured

YOUR PLATFORM STACK

Not every platform matters equally. Instagram is the foundation — everything else supports it. Your priority order determines where your time goes. Spreading effort equally across six platforms is a mistake. Concentrate on what drives revenue.

Primary Platforms (Mandatory)

These three platforms form the core of your system. You cannot skip any of them. Instagram is the traffic engine, Threads amplifies Instagram's reach, and Telegram warms followers before conversion.

- Instagram — Your most important platform. Reels, Stories, and carousels drive discovery. Profile visits convert to followers. This is where the majority of your funnel traffic originates
- Threads — Text-based engagement platform linked directly to your Instagram. Threads activity increases your Instagram visibility. Post 3-4 times daily to generate profile visits
- Telegram — Free channel where followers access teaser content. Acts as a warming layer between following you and paying. Post 2-3 times daily with content that creates desire for your paid platform

Support Platforms (Recommended)

These platforms supplement your primary stack. They are not mandatory at launch. Add them once your Instagram and Threads system is stable and producing consistent growth.

- TikTok — Short-form video platform with massive organic reach. Supplements Instagram by reaching a different audience segment. Carousel posts perform especially well for AI content
- Reddit — Community-driven platform where niche content goes viral inside specific subreddits. High-intent traffic but requires careful warmup to avoid bans. Do not post links until karma is established
- Twitter/X — Conversation-driven platform. Growth comes from replying to large accounts, not from posting original content. Requires Twitter Premium for meaningful visibility

PRIORITY RULE

If you only have 2 hours per day, spend 100% of it on Instagram and Threads. Only expand to TikTok, Reddit, or Twitter/X when your primary platforms are running smoothly and you have bandwidth to add complexity.

STARTUP COSTS & TOOL STACK

The AI influencer model has a low barrier to entry. Total startup cost is approximately $200-$500. Most tools have free tiers that work for your first persona. Do not invest in premium tools until your first page is generating revenue.

Required Expenses

- Dedicated phone or device — $150-$400 (used phones work). One persona per device for account safety
- Prepaid SIM card — $10-$30. Needed for phone verification on platform signups
- VPN service — $5-$12 per month. Required for geo-targeting your content to US audiences
- AI image generation credits (Seedream 4.5, Nano Banana 2) — $0-$50 per month depending on usage
- Kling video credits — $10-$30 per month. Standard mode is sufficient for starting

Free Tools

- Photopea — Free browser-based Photoshop alternative for image editing and artifact removal
- CapCut — Free video editor. Handles cuts, transitions, trending audio, and text overlays
- AllMyLinks or Linktree — Free link in bio pages for your conversion funnel
- Google Sheets — Free content calendar and metrics tracking
- Telegram — Free messaging platform for your warming channel

The Core Tool Stack

Every tool in this stack serves a specific function in the content pipeline. Modules 2-4 cover each tool in detail with step-by-step workflows.

- Seedream 4.5 — Primary AI image generator. Produces photorealistic images from text prompts. Best for generating your base model and standard content
- Nano Banana 2 — Secondary AI image generator. Stronger face consistency when using reference images. Use alongside Seedream for variety
- Kling — AI video generator. Converts a single image into a realistic 5-10 second video clip. Standard and Professional modes available
- Photopea — Image editor for fixing AI artifacts, adjusting lighting, and adding the 2% grain that makes images look real
- CapCut — Video editor for trimming clips, adding trending audio, stitching multiple clips, and optimizing export settings per platform

REALISTIC REVENUE TIMELINE

Revenue builds slowly. The first 30 days are almost entirely setup and warmup with zero to minimal income. This is normal and expected. The operators earning $5K-$10K+ per month have been running their systems for 6-12 months.

Month-by-Month Expectations

- Month 1: $0-$200 — Model creation, account setup, warmup protocols. Most of this month is preparation. Revenue is near zero
- Month 2-3: $100-$500 — Accounts are live, content is flowing, first followers start converting. Revenue trickles in as the funnel begins working
- Month 3-6: $500-$3,000 — Consistent posting and growing audience. Funnel is optimized. Revenue grows as follower count and trust increase
- Month 6+: $2,000-$10,000+ — Scaled operations, possibly multiple personas. Revenue compounds as systems become efficient and audience compounds

REVENUE REALITY

Most operators earn under $500 in their first three months. This is normal. Do not compare your Month 1 to someone else's Month 12. The system works, but it requires patience and consistency.

What Drives Revenue Growth

Revenue scales based on three factors. Understanding which lever to pull at each stage prevents wasted effort.

- Follower volume — More followers means more people entering your funnel. Driven by content quality and posting consistency
- Conversion rate — Percentage of followers who become paying subscribers. Driven by funnel optimization, Telegram warming, and subscription page quality
- Retention — How long subscribers stay. Driven by content quality on the paid platform and how regularly you post exclusive content

In Month 1-3, focus entirely on follower volume. You need audience before you can optimize conversion. In Month 3-6, shift focus to conversion rate and funnel optimization. In Month 6+, focus on retention and scaling to additional personas.

DAILY TIME INVESTMENT

This is not passive income. During the first 3 months, expect to invest 2-4 hours per day, seven days per week. After Month 3-6, daily time drops to 1-2 hours once systems are built and content batching is established.

Daily Task Breakdown (Month 1-3)

- Content generation — 30-60 minutes. Batch image and video generation sessions. Aim to produce 3-5 days of content in one session
- Posting and engagement — 30-60 minutes. Post across platforms, respond to comments, engage with other accounts to build algorithmic trust
- Account management — 15-30 minutes. Check metrics, verify account health, monitor for shadowbans or warnings
- Strategy and planning — 15-30 minutes. Plan content calendar, review what performed well, adjust posting schedule

TOTAL DAILY INVESTMENT

2-4 hours per day during the first 3 months. After Month 3-6, this drops to 1-2 hours as content batching and systems become efficient. The early time investment builds the system that eventually runs lean.

How Time Shifts Over Months

The balance of tasks changes as your system matures. Early months are heavy on content creation and warmup. Later months shift toward engagement and optimization.

- Month 1 — 70% content creation, 20% warmup and engagement, 10% setup and planning
- Month 2-3 — 50% content creation, 30% posting and engagement, 20% funnel and strategy
- Month 3-6 — 30% content creation (batched), 40% engagement and community, 30% optimization and scaling
- Month 6+ — 20% content creation (highly batched), 30% engagement, 30% monetization optimization, 20% scaling to new personas
