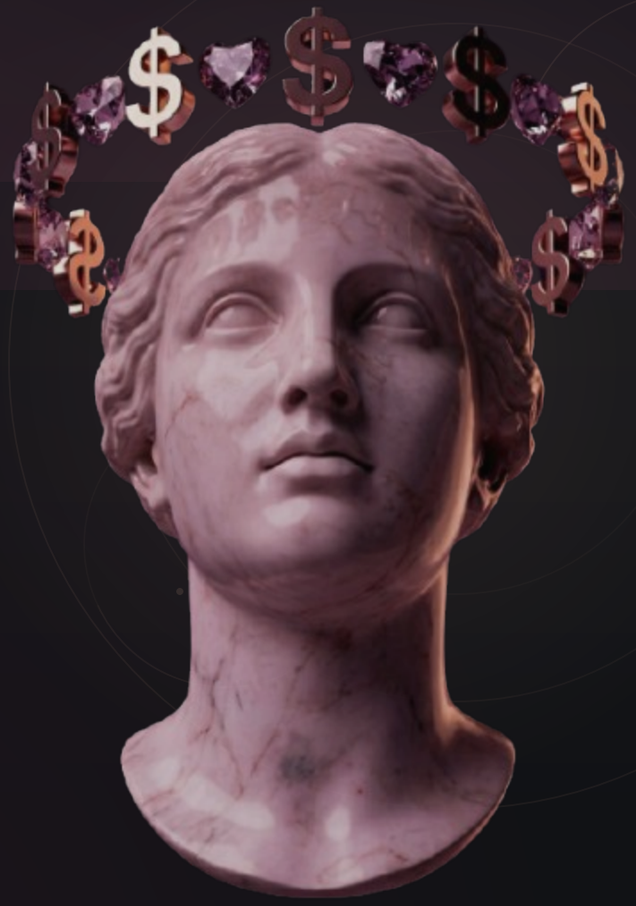
Fanvue is the platform to start monetizing your AI models



MODULE 3: SFW IMAGE CREATION OVERVIEW

Learn How to Generate SFW Images from Reference Images

What You'll Learn

- Lesson 1: Reference Image Workflow
- Lesson 2: Prompt Engineering & Editing AI Images
- Lesson 3: Platform-Specific Image Rules

Key Takeaways

- Always generate new images using your base model as a reference in Nano Banana 2
- Write detailed prompts with setting, lighting, outfit, and camera angle — save templates that produce good results
- Use Photopea (free) to export Instagram carousels — this helps avoid the AI filter on Instagram
- Always add approximately 2% grain/noise as the final editing step — this is what makes AI images pass as real photos
- Use the edit feature in Nano Banana 2 to fix specific problem areas without regenerating the entire image
- Know each platform's content rules — TikTok and Instagram are strictest, Reddit is most flexible
- When in doubt, keep it safe — a content strike can derail weeks of progress
