MODULE 2
LESSON 3

Face Consistency & Building Your Content Library

Learn the essentials of face consistency & building your content library

AI INFLUENCER METHOD | OUR DISCORD

LESSON 3: FACE CONSISTENCY & BUILDING YOUR CONTENT LIBRARY

Consistency is what separates a believable AI influencer from an obvious fake. Your audience will scroll through your page. If the face changes between posts, trust is destroyed instantly. This lesson covers how to maintain your model's look using Nano Banana 2 for all SFW content, why you need to generate multiple versions of every image, and how to build a content library before you launch.

> **INCONSISTENT FACES WILL GET YOU CAUGHT**
>
> If your model's face looks different between posts, people will notice. Followers will get suspicious, call you out in comments, or report your page. One inconsistent image is all it takes to lose credibility. Every single image you post must look like the same person — no exceptions. This is the number one reason AI pages get exposed.

The Reference Image Method

Nano Banana 2 is your main tool for all SFW content generation. It supports reference image workflows — you upload your seed images from Lesson 2 as references, and the tool uses them to maintain your character's face and body across new generations. This is how you keep every image looking like the same person.

How the Reference Method Works

- → Start with your two locked-in reference images from Lesson 2 (face + body)
- → Upload them as reference inputs when generating new images in Nano Banana 2
- → Write a new prompt describing the desired scene, outfit, or setting
- → The tool preserves the face and body from your references while creating the new scene
- → Generate at least 3 versions of every image — pick the best one
- → Only keep images where the face matches your reference consistently

Why You Must Generate at Least 3 Per Image

Nano Banana 2 will not produce a perfect result every time. Some generations will have inconsistent faces, unrealistic features, or subtle artifacts. This is normal — it is part of the process. You need to generate at least 3 versions of every piece of content and pick the best one.

- Generation 1 might have a slightly different jawline or eye shape
- Generation 2 might nail the face but have a weird hand or background
- Generation 3 might be the one that looks perfect
- Sometimes you will need 5-10 generations to get one usable image
- Never settle for 'close enough' — if the face is off, regenerate

> **3 GENERATIONS MINIMUM**
>
> Make this your rule: never post the first image you generate. Always generate at least 3 versions, compare them against your reference images, and only keep the one that matches best. This single habit will save your page from getting exposed.

Reference Best Practices

- Always use both your face and body reference images together
- Higher resolution reference images produce better consistency
- Never change your primary reference images once your page is live
- Adjust reference strength settings if the face drifts — higher strength means more consistency but less variety

Consistency Rules — What Must Stay Locked

- Face structure — jawline, cheekbones, nose shape, lip shape
- Body type and proportions
- Skin tone — must remain constant across all lighting
- Eye color — locked in from the start, never changes
- Core hair color (natural changes like highlights are acceptable)

What Can Vary Naturally

- Lighting and shadows (indoor vs outdoor, golden hour vs studio)
- Clothing and outfits (expected and creates content variety)
- Background and location (home, outdoors, gym, cafe)
- Makeup style (subtle changes only — not dramatic transformations)
- Camera angle and distance (selfie vs full body vs portrait)
- Hair styling (up, down, braided — same base color)

> **VISUAL CONSISTENCY CHECK**
>
> Before posting any image, place it next to your last 3 posts. If the face does not look like the same person at a glance, do not post it. Regenerate until it matches. This 5-second test saves you from destroying trust with your audience.

Building Your Content Library

You should never be scrambling for content. Before you post anything publicly, build a library of at least 30-50 images. This gives you a buffer and lets you plan your content calendar without pressure. Running out of content mid-warmup kills momentum and consistency.

Batch Generation Strategy

Dedicate specific sessions to content generation rather than creating images one at a time. A focused session with Nano Banana 2 should produce 10-20 usable SFW images. Remember — generate at least 3 versions of each and only keep the best.

- Set aside 2-3 dedicated sessions per week for content generation
- Generate 10-20 usable images per session with varied prompts
- Use Nano Banana 2 for all SFW content (Instagram, Threads, TikTok)
- Change outfits, settings, and poses across the batch
- Sort images into categories immediately after generation
- Keep a 'rejected' folder — you may salvage these later with editing
- Target: build a 2-week content buffer before launching any account

Content Categories to Build

- Profile photos and headshots: 3-5 (your best face shots)
- Casual lifestyle shots: 10-15 (everyday settings, natural poses)
- Glamour or dressed-up shots: 5-10 (polished, curated content)
- Close-up selfie-style images: 5-10 (intimate, personal-feeling)
- Story-ready casual content: 10+ (raw, in-the-moment aesthetic)

Folder Structure

Organization saves time and prevents panic. Set up this folder structure before you start generating.

- /PersonaName/Reference/ — Your seed images and reference photos
- /PersonaName/Library/Headshots/ — Profile photos and close-ups
- /PersonaName/Library/Casual/ — Lifestyle and everyday content
- /PersonaName/Library/Glam/ — Dressed up and polished shots
- /PersonaName/Library/Stories/ — Casual, raw-feeling content for Stories
- /PersonaName/Rejected/ — Images that did not pass quality check
- /PersonaName/Posted/ — Archive of already-posted content

Prompt Templates for Each Category

Save these prompt templates and swap out the details for each generation. This ensures consistent quality while creating variety.

GOOD EXAMPLE:

Headshot: 'Close-up portrait, natural light from window, soft smile, looking at camera, photorealistic, iPhone quality'

Casual: 'Sitting on couch in oversized hoodie, warm indoor lighting, relaxed pose, candid feel, photorealistic'

Glam: 'Black dress, mirror selfie, evening lighting, confident pose, photorealistic'

Gym: 'Workout outfit, gym mirror selfie, overhead fluorescent lighting, post-workout glow, candid'

Story: 'Taking selfie in car, natural daylight, casual expression, slightly messy hair, iPhone selfie style'

MINIMUM BEFORE LAUNCH

Do NOT launch any social media account until you have at least 30 quality images saved and sorted across multiple categories. Running out of content mid-warmup kills momentum and consistency. Your content library is your business inventory — stock it before you open the store.

END SUMMARY

- Choose your niche based on market demand, not personal preference — girl-next-door and fitness niches have the highest proven demand
- Seedream 4.5 and Nano Banana 2 are your primary image generation tools — master both for different content types
- Your base model's face is your brand — generate 20-30 variations and select the strongest as your seed image
- Use the reference image method in Nano Banana 2 to maintain face consistency across all future SFW generations
- Always generate at least 3 versions of every image — Nano Banana 2 will produce inconsistent or unrealistic results, so pick only the best
- Lock in face structure, body type, skin tone, and eye color from day one — only outfits, lighting, and settings should vary
- Build a library of 30-50 images sorted into categories before launching any account
